                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This is the 5' sequence of the clone insert
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKFZ); Email s.wiemann@dkfz- heidelberg.de;
sequenced by EMBL (European Molecular Biology Laboratories,
Heidelberg/Germany) within the cDNA sequencing consortium of the
German Genome Project.

This EST was generated by sequencing from the 3' end of the clone.
Sequences have been trimmed to remove vector sequence and low quality sequence with phred score less than 20.
Seq primer: T7 primer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Homo sapiens

UI-ESO1 is a normalized CDNA library containing the following tissue(s): fetal eye. The library was constructed according to Bonaldo. Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oilso-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (GTGTATAC: This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI)."

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

It currently consists of 3 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces are represented as runs of N. The order of the pieces of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 19 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

NOTE: This is a 'working draft' sequence. It currently consists of 69 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be undated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                    Unpublished

It currently consists of 4 contigs. The true order of the pieces is a not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Assembly program: XGAP4; version 4.5

On Jul 29, 2002 this sequence version replaced gi:21535766.
IMPORTANT: This sequence is unfinished and does not necessarly represent the correct sequence is unfinished and does not necessarly represent the sequence is unfinished and the release of this data is work on the sequence is in progress and the release of this data is based on the understanding that the sequence may change as work continue. The sequence may be contaminated with foreign sequence from E.coli, yeast, vector, phage, etc.
The nucleotide sequence of this BAC clone was generated by combining Monsanto and Genoscope sequencing data.

35565 bp contig from 47488 to 83052.

* NOTE: This is a "working draft" sequence. It currently
* consists of 5 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* This contig of 11140 bp in length

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Direct Submission

Submitted (20-JUL-2000) Sanger Centre, Hinxton, Cambridgeshire, CB10 183, UK. E-mail enquirles: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk

On Jul 22, 2000 this sequence version replaced gi:9368784.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the corresponding to the overlapping clone name. Note that the corresponding to the overlapping clone, as we submit sequence submission only a small overlap as described above.

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em., EMBL; Sw.: SWISSPROT; Tr., TREMBL; Wp.: WORNPEP; Information the WORNPEP database can be found at thtp://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence chromosome 1, constructed by the Sanger Centre Chromosome 1 mapping chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping thtp://www.sanger.ac.uk/HGP/Chr1

RP1-120G22 is from the library RPCI-1 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. For further upcamens.

The present sequence represents an alternative form of a cancer associated antigen gene designated KOC-2. The specification also describes a cancer associated antigen designated CT7. The CT7 by Dolynucleotide was isolated from SK-MEL-37 melanome cells. The CD7 polyneptide has some homology with MAGE-10, limited to about 210 carboxy terminal amino acids. The amino terminal of the protein has a repetitive pattern, with repeats rich in serine, proline, glutamine and leucine, and an almost invariable core of the peptide given in AAV43877. The CT7 polypeptide can be processed to peptides which provoke lysis by polypeptide can be processed to peptides and polypeptides can be used for cycloptic cells. The polynucleotides and polypeptides can be used for treating a cancerous condition and screening for or diagnosing cancerous conditions. The cancer associated antigens can be used as an immunogenic
                        per primers AAZ36157-58 were used to amplify a cancer associated antigen gene designated KOC-2. The specification also describes a cancer associated antigen designated CT7. The CT7 polymuclecitide was isolated from SK WEL-37 melanoma cells. The polypeptide has some homology with terminal of the protein has a repetitive pattern, with repeats rich in terminal of the protein has a repetitive pattern, with repeats rich in the peptide given in AAX43877. The CT7 polypeptide can be processed to the peptides which provoke lysis by cytolytic T cells. The polymuclecides and polypeptides can be used for treating a cancerous condition and antigens can be used for treating a cancerous condition and antigens can be used an animumogenic or vaccine composition with an adjuvant, e.g. a cytokine, a saponin, or granulocyte macrophage-colony
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Old LJ;

No ORP has yet been conclusively identified within the present sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oilgo-dT primed CDNA ilbraries. Such ESTS are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTS are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTS are also used in diagnostic, forensic, gene therapy and chromsome mapping procedures.

The present invention describes primer sets for synthesising 5602

full-length cDNAs defined in the specification. Where a primer set

comprises: (a) an oligo-dT primer and an oligomuclectide complementary

to the complementary strand of a polynuclectide which comprises one of

coligonuclectide comprises at least 15 nuclectides; or (b) a combination

of an oligonuclectide comprises as least 15 nuclectides; or (b) a combination

complementary strand of a polynuclectide which comprises a 5'-end

complementary strand of a polynuclectide which comprises a 5'-end

sequence and an oligonuclectide comprising a sequence complementary to a

complementary strand of a polynuclectide which comprises and the combination of

complementary strand of a polynuclectide strand of sequence of sequence of an oligonuclectide comprises as 1'-end sequence, where the

complementary strand of sequence is selected from those defined in

the 5'-end sequence 3'-end sequence is selected from those defined in

the specification. The primer sets can be used in antisense therapy and

the specification and/or diagnosis of the abnormality of the proteins encoded by

the full-length cDNAs. The primers are also useful for the

complementary full-length cDNAs. The primers are also useful for the

the full-length cDNAs. The primers allow obtaining of the full-length

complementary sull-length cDNAs. The primers and low obtaining of the full-length

AMH13613 to AMH18742 represent human cDNA sequences; AMH13618 and

AMH13613 to AMH18742 represent human cDNA sequences; AMH13618
                                                                                                                                                                                                            Human, primer; detection; diagnosis; antisense therapy; gene therapy; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAB95893 represent human amino acid sequences, and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Primer sets for synthesizing polynuclectides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Yamamoto J;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Saito K, Ya

The invention relates to isolated polymucleotide (I) and propertide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PER) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or treat disease states involving (II). (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) and (II) are useful in medical considers involving aberrant protein expression or biological activity. (I disorders involving aberrant protein expression or biological activity. (I disorders involving aberrant protein expression or biological activity. (I disorders involving aberrant protein expression or biological activity. (I disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences the invantion.

Che polymore coding sequences of the invantion.

Che sequence data for this patent did not appear in the printed of the coding sequence in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences.

            The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapphing, and in recombinant production of (II). (II) in the state also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) and (II) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in capponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences haskelly-hasyster reates to assess biodiversity amino acid sequence data for this patent did not appear in the printed sequence the invalidation, but was obtained in electronic format directly from WIPO

(HELI-) HELIX RES INST.

```
The present invention describes primer sets for synthesising 5602

(ill-length cDNAs defined in the specification. Where a primer set

(ill-length cDNAs defined in the specification. Where a primer set

(inl-length cDNAs defined in the specification where the

(inl-length cDNAs defined in the specification, where the

(inl-length comprises at least 15 nucleotides, or (b) a combination

(inl-length comprises at least 15 nucleotides) or (b) a combination

(inl-length comprises at least 15 nucleotides) or (b) a combination

(inl-length comprises at least 15 nucleotides as 5'-end

(inl-length comprises at least 15 nucleotides and the compination of

(inl-length comprises at least 15 nucleotides and the combination of

(inl-length comprises at least 15 nucleotides and the combination of

(inl-length comprises at least 15 nucleotides and the combination of

(inl-length comprises at least 15 nucleotides and the combination of

(inl-length comprises at least 15 nucleotides and the compination of

(inl-length comprises at least 15 nucleotides and the compination of

(inl-length comprises at least 15 nucleotides and the compination of

(inl-length comprises at least 15 nucleotides and the compination of

(inl-length comprises at least 15 nucleotides and the compination of

(inl-length comprises at least 15 nucleotides and the compination of

(inl-length comprises at least 15 nucleotides and the compination of

(inl-length comprises at least 15 nucleotides and length for the primers are also useful for the

incomparation in this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA (ABBS7737-ABB72072).
                                                                                                                                                                                                                            New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Drosophila; developmental biology; cell signalling; insecticide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Drosophila melanogaster genomic polynucleotide SEQ ID NO 39007.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score 17.2; DB 23; Length 1217;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)

c amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)

c activity, and can be used in gene therapy and vaccine production. (II)

c proteins and polynucleotides may be used in the prevention, diagnosis and

c treatment of diseases associated with inappropriate (I) expression. For

c expression by rectifying mutations or deletions in a patient's senome

cc expression by rectifying mutations or deletions in a patient's senome

cc that affect the activity of (I) by expressing inactive proteins or to

c supplement the patients own production of (I). Additionally, (I)

c supplement the patients own product the secreted (I), by inserting

cc polynucleotides may be used to produce the secreted (I), by inserting

cc protein. (I) proteins and polynucleotides may be used to prevent,

cancers and cancer metastess of haematopoietic-derived cells. AAK64703

cc cancers and cancer metastess of haematopoietic-derived cells. AAK64703

cc cancers and cancer metastess of haematopoietic-derived cells. AAK64703

concers and cancer metastess of haematopoietic antigen genomic

concers and cancer metastess of haematopoietic antigen genomic

concers and cancer metastess of haematopoietic antigen genomic

concers from the present invention. AAK64922 to AAK64550 and AAM82169

crepresent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and insectle. The interactions in higher evkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511); expressed DNA equence. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences. Claim 1; SEQ ID NO 39007; 21pp + Sequence Listing; English. Sequence 3408 BP; 945 A; 779 C; 790 G; 894 T; 0 other; (ABB57737-ABB72072).

Breast Tumour Proteins and nucleic acids useful for the prevention, diagnosis and treatment of breast cancer -WPI; 2001-611721/70.

Claim 37; Page 193; 297pp; English.

The invention relates to isolated breast tumour proteins and nucleic acids that encode them, including immunogenic fragments of the proteins. Also included are expression vectors expressing the proteins, transformed cells and antibodies raised against the proteins or an antigen presenting cell expressing the protein. The protein and an antigen presenting cell expressing the protein. The protein and diseases associated with inappropriate breast tumour protein expression, i.e. breast tumours and breast cancer e.g by gene therapy. The nucleic acids and their complements may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in

samples, and therefore which patients may be in need of restorative therapy. The proteins, nucleic acids and antibodies may be used in assays to identify modulators (e.g. antagonists) of breast tumour protein expression and activity. The antibodies and antagonists may also be used to down regulate expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of the proteins in samples (e.g. by enzyme linked immunosorbant assay (ELISA)) and in other immuno-purification diagnostic techniques. The present sequence is a CDNA from a breast tumour cDNA library isolated by subtractive hybridisation against a normal breast cDNA library. 886666666668888888

An isolated polypeptide useful for the treatment and diagnosis of tumors e.g. breast cancer comprises at least an immunogenic portion of a breast tumor protein -

Claim 66; Page 138; 238pp; English.

The present invention provides the coding sequences and some protein sequences of proteins associated with breast cancer in humans. These sequences can be used in the diagnosis and treatment of cancers, particularly breast tumours.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to isolated polymucleotides ([1] - [IV) encoding breast cancer antiqens SYN22A12, SYN22A2, B722P and B726P (4 of 172 cDNA cancer antiqens SYN22A12, SYN22A2, B722P and B726P (4 of 172 cDNA sequences included in the specification). Also included are isolated comprising sequences with 90 % identity to (1)-IV), an expression vector comprising the cDNAs, a host cell transformed with the expression vector and a diagnostic kit comprising 2 oligomuclectide primers or probes, where 1 of the oligomuclectide primers or probes, where 1 of the oligomuclectide primers or probes, where 1 of the oligomuclectide primers or probes; where 1 of the oligomuclectide sequences with 90 % compression and B726P peptides they encode can be used as diagnostic markers, as models for the development of human therapeutic targets.

CC markers, as models for the development of human therapeutic targets of in the identification of therapeutic proteins, and serve as targets of the development of human therapeutic proteins. And serve as targets of the development of human therapeutic general that may be used for the treatment of breast cancer. In particular, they may be transfected (using a vector) into a host cell that may be cultured to express the breast cancer antigens may then be used in the production of antibodies against SYN22A12, BYN22A2, BY33P and B726P, which in turn configuration of breast cancer. Short 10 nucleotide sequences of (1) to (IV) may be used as primers and probes in hybridisation and amplification creations for the detection of SYN22A12, SYN22A2, B723P and B726P in the cancer. The present sequence is a breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New nucleic acids encoding breast cancer antigens SYN22A12, SYN22A2, . B723P and B726P, useful for the prevention, diagnosis and treatment of breast cancer -

AAX20500-21243 represent polynucleotide sequences from the genome of Treponema pallidum. The sequences can be used for detection, diagnosis, characterisation, prevention and therapy for T. pallidum infections, particularly syphilis. They can also be used for detecting diseases related to Borrella infections in animals, and for the production of biosynthetic products such as enzymes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  enolase 3(beta, muscle); ENO3; single nucleotide polymorphism;

```

```
The present invention provides the protein, cDNA and genomic sequences of a human enolase 3 (beta, muscle) isogene containing a number of single nucleotide polymorphisms (SNPS). The sequences can be used to identify the haplotype of an individual and identify whether particular haplotypes are linked to certain diseases. The present sequence is the ENO3 gene.
                                                                                                                                                                                                                                                                                                                                                                                           Novel genetic variants of enclase 3, (beta, muscle) gene useful in studying expression and function of the protein, and for screening drugs to treat disorders of glycolytic pathway .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 13308 BP; 2874 A; 3775 C; 3758 G; 2901 T; 0 other;
